An Expansionary Moment Across the Board

The set-up for Alphabet was not easy, with the stock rallying ~20% since 3Q's results. Against that backdrop, the company reported virtually no hair on revenue and OI results, with strong growth across all major segments - consolidated revenues grew to $114bn, +18% y/y (+17% FXN), outperforming the street by ~2%. While capex guidance for 2026 was considerably above expectations, **we think the resulting infrastructure footprint creates a meaningful moat that few (if any) can replicate, and perhaps just as importantly, one that Alphabet can best monetize via the combination of its broad service offering (both advertising and subscriptions) as well as through the rapidly accelerating Cloud business.**

On Search, AI investments are truly expanding the pie for Alphabet: These new features are driving an improvement in ads quality (or higher conversions), better understanding of user intent (improved ability to deliver ads against a greater proportion of searches), new AI user experiences (new surfaces to monetize against like AI Mode) and AI ad user tools (which drives both efficacy and efficiency of spend for Alphabet's advertising partners). All these features expand the pie for Google, and while they are all in the early innings of their lifecycle, they are already contributing to accelerated Search revenue growth. On the monetization side, AI Max is already used by hundreds of thousands of advertisers, unlocking billions of net-new queries. We see this as a powerful greenfield growth vector as the vast majority of search queries are not directly commercial in nature. As such, even modest improvements in identifying (and capitalizing on) commercial-adjacent queries could unlock meaningful incremental growth opportunities for Google.

Cloud was the other standout this quarter, while the y/y growth acceleration was encouraging, we were even more impressed by the 55% q/q increase in the backlog (adding ~$82bn q/q to $240bn, up 158% y/y), highlighting the outsized demand for GCP services. **More and more, it appears evident that the company's full-stack, vertically integrated approach (levering its own data centers, its own TPUs, integrated software stack, and its own frontier models) is becoming a key selling point to new customers.** To that end, the company added more $1bn deals in 2025 vs the prior three years combined. As we laid out in our 2026 outlook, even after applying a discount to Google's historical NTM revenue / backlog ratio against the company's 4Q25's updated backlog, we calculate that Cloud has the potential to reach $100-$150bn of revenue in 2026, more than double the 4Q25 runrate revenue at the high end of the range. While FY capex guidance was increased to $175-$185bn (well above consensus at $123bn), we (and we suspect investors as well)

IMPORTANT RESEARCH DISCLOSURES AND ANALYST CERTIFICATIONS LOCATED IN APPENDIX 1. Deutsche Bank does and seeks to do business with companies covered in its research reports. Thus, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

This document is being provided for the exclusive use of BRIAN HO at THE UNIVERSITY OF HONG KONG.

will give the company a pass as this is being earmarked to satisfy growing cloud infrastructure demand, as well as AI investments.

All in all, we are very encouraged that the GOOG leadership team is focusing on what they can control: (1) growing search volumes and advertising performance via AI-led product innovation, (2) enhancing its wide array of products with AI functionality like Chrome which is increasingly powered through deep integrations with Gemini, AI mode in Search, and more agent capabilities on the way (3) building on Cloud momentum with a growing suite of products/services and infrastructure investments, (4) scaling and investing in viable other Bets like Waymo, which has the potential to unlock very large TAMs, (5) managing costs, and (6) delivering shareholder returns. **In sum, we increase our forward revenue growth expectations given the strong underlying fundamental tailwinds across all business lines, in conjunction with favorably trending FX. As such, our FY26/27 revenue estimates go to $477bn/$554bn from $459bn/$522bn. Moreover, with positive momentum from the re-engineered cost base, we raise our FY26/FY27 GAAP EPS outlook by ~5% each to $11.73/$14.17 from our prior $11.22/$13.51. We maintain our Buy rating, and increase our target price to $390 (from $370), which is anchored to a 27x FY27 GAAP P/E multiple (unchanged).**

Cloud has the potential to surprise materially on the upside in FY26

Alphabet hasn't filed its 10K yet, but in the past 3 quarters, the company has said it expects to recognize 55% of its Cloud backlog within 2 years. When we look back at the backlog disclosures going back to 1Q21, Google Cloud has typically recognized ~60% of its backlog as revenue in the next 12 months, some of that from the backlog, some from new customers, and some from customers spending in excess of their commitments. At the 4Q earnings call, the company said "we continue to deepen our relationships with existing customers, who are outpacing their initial commitments by over 30%." When we look at Street estimates for Google Cloud revenue in FY26, that amounts to only 32% of its current backlog of $240bn. If we assume Alphabet recognizes 45-65% of its backlog as revenue during FY26, that could imply Cloud revenue of $110-$155bn, or $15-$63bn above our revised estimate of $92bn for the segment. Further assuming 35-45% incremental OI margins, we think the incremental earnings impact could be $1-$2 per share.

Figure 1: Potential upside from higher Cloud Revenue

4Q25 results beat top line expectations; OI missed on 1x SBC on Waymo

The company reported virtually no hair on revenue and OI results, with strong growth across all major segments - consolidated revenues grew to $114bn, +18% y/y (+17% FXN), outperforming the street by ~2%. Excluding the one-time $2.1bn stock-based compensation related to Waymo, OI would be ~$38bn, also better than the Street at ~$37bn.

Outlook

We increase our forward revenue growth expectations given the strong underlying fundamental tailwinds across all business lines, in conjunction with favorably trending FX. As such, our FY26/27 revenue estimates go to $477bn/$554bn from $459bn/$522bn. Moreover, with positive momentum from the re-engineered cost base, we raise our FY26/FY27 GAAP EPS outlook by ~5% each to $11.73/$14.17 from our prior $11.22/$13.51.

The **bigger changes to our model** include the following.

- **Search and Cloud Revenue increase**. We are raising our FY26/27 Search revenue by ~2% each to $254/$279bn from $249/$274bn previously. We are increasing our Cloud revenue more substantially, to $92bn in FY26 (or up 58% y/y) from $77bn, and to $134bn in FY27 (up 45% y/y) from $104bn prior. In 1Q26, we think Cloud revenue growth could accelerate to 50% y/y FXN from the reported 46% y/y growth in 4Q25 and 32% in 3Q25 on the back of the strong demand for AI compute capacity.
- **Capex goes up**. We are raising our FY26 capex assumption to $182bn from $125bn previously, in line with the guide of $175-$185bn for the year. We expect capex to grow mid-to-high SD in FY27, before moderating in FY28.
- **D&A increases**. The company noted that in 4Q25, about 60% of this capex will be spent on servers, with the remaining 40% on data centers and networking equipment. We think capex spend in FY26 likely would be similarly distributed. Assuming a server life of 5 years, data centers at 30 years, and networking equipment at 8-10 years, we think the incremental capex likely may be depreciated at ~9 years on average. Not surprisingly, the company said it expects D&A y/y growth to accelerate in 1Q26 from

This document is being provided for the exclusive use of BRIAN HO at THE UNIVERSITY OF HONG KONG.

4Q25 levels on the back of the higher capex, and for D&A to increase substantially in FY26. We are projecting D&A to increase $12bn in FY26 to $33bn from $21bn in FY25.

- **EPS improves modestly**. Our GAAP OI improves by ~5% in both FY26 and FY27 versus our prior estimates; we similarly raise our FY26/FY27 GAAP EPS outlook by ~5% each to $11.73/$14.17 from our prior $11.22/$13.51 estimates.
- **FCF declines, primarily on the higher capex**. We are projecting FC to decline to ~$24bn in FY26 from $73bn in FY25, and from our prior estimate of $70bn.

Valuation

We value Alphabet as the average of a sum of the parts and a P/E multiple, both based on our FY27 estimates. **We maintain our Buy rating, and increase our target price to $390 (from $370), which is anchored to a 27x FY27 GAAP P/E multiple**

This document is being provided for the exclusive use of BRIAN HO at THE UNIVERSITY OF HONG KONG.

(unchanged). Key risks include: 1) Regulatory oversight has become more relaxed recently, but if scrutiny increases, Alphabet, as one of the largest global consumer-facing internet companies, could see more targeted enforcement. 2) While Alphabet's Other Bets losses have been contained over the last few years, significant investment, absent a clear path to ROI, could weigh on investor sentiment, potentially creating downward pressure on the stock. 3) Overall deterioration of macro conditions could drastically reduce advertisers' ad budgets, thus impacting Google Search and YouTube revenues.

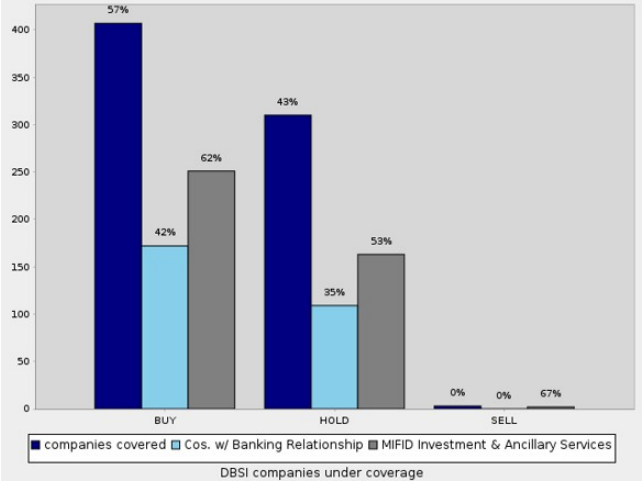
Equity rating dispersion and banking relationships



Equity Rating and Dispersion Key

The Equity Rating Dispersion Chart depicts the following:

The proportion of recommendations that are rated "buy", "sell" and "hold" over the previous 12 months. This is shown for securities issued in the stated region e.g. "Europe Universe". See rating definitions below. This is represented by the "Companies Covered" bars in the chart. The percentage value displayed above the bar is the proportion as a percentage. E.g. 50% above the “buy” / “Companies Covered” bar means that 50% of DB’s equity research covered companies over the past 12 months have a “buy” rating.

Next to each of the three respective bars showing the proportion of "buy", "sell" and "hold" recommendations we provide two additional bars to show:

- The proportion of "buy", "sell" or "hold recommendations where Deutsche Bank and or/Affiliates provided MIFID Investment or Ancillary Services in the past 12 months. This is represented in the "MIFID Investment and Ancillary Services" bar. The percentage value displayed above the bar shows the proportion of Companies Covered with the given rating where DB has also provided MIFID Investment and Ancillary Services in the past 12 months. E.g. 50% above the “Cos. w/ MIFID Investment and Ancillary Services” bar means 50% of the Companies Covered with the rating stated have also received MIFID Investment and Ancillary Services from DB.

- The proportion of "buy" (or "sell" or "hold) recommendations where Deutsche Bank and or/Affiliates has provided Investment Banking services in the past 12 months for which it has received compensation. The percentage value displayed above the bar shows the proportion of Companies Covered with the stated rating where DB has also provided Investment Banking services in the past 12 months. E.g. 50% above the “Cos. w/ Investment Banking relationship” bar means 50% of the Companies Covered with the rating stated also have an Investment Banking Relationship with DB.

Buy: Based on a current 12- month view of TSR, we recommend that investors buy the stock.

Sell: Based on a current 12-month view of TSR, we recommend that investors sell the stock.

Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

TSR = Total Shareholder Return. Percentage change in share price from current price to projected target price plus projected dividend yield

Newly issued research recommendations and target prices supersede previously published research.

Additional Information

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively 'Deutsche Bank'). Though the information herein is believed to be reliable and has been obtained from public sources believed to be reliable, Deutsche Bank makes no representation as to its accuracy or completeness. Hyperlinks to third-party websites in this report are provided for reader convenience only. Deutsche Bank neither endorses the content nor is responsible for the accuracy or security controls of those websites.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies, perspectives or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that may be inconsistent with Deutsche Bank's existing longer-term ratings. Some trade ideas for equities are listed as Catalyst Calls on the Research Website (https://research.db.com/Research/) , and can be found on the general coverage list and also on the covered company's page. A Catalyst Call represents a high-conviction belief by an analyst that a stock will outperform or underperform the market and/or a specified sector over a time frame of no less than two weeks and no more than three months. In addition to Catalyst Calls, analysts may occasionally discuss with our clients, and with Deutsche Bank salespersons and traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if an opinion, forecast or estimate changes or becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company-specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst or of the Research Department Management, and the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst's judgment. The financial instruments discussed in this report may not be suitable for all investors, and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice, and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Performance calculations exclude transaction costs, unless otherwise indicated. Unless otherwise indicated, prices are current as of the end of the previous trading session and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is also sourced from Deutsche Bank, subject companies, and other parties. Artificial intelligence tools may be used in the preparation of this material, including but not limited to assist in fact-finding, data analysis, pattern recognition, content drafting and editorial corrections pertaining to research material.

The Deutsche Bank Research Department is independent of other business divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research are available on our website (https://research.db.com/Research/) under Disclaimer.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed-rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or liquidation of positions), and settlement issues related to local clearing houses are also important risk factors. The sensitivity of fixed-income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates - these are common in emerging markets. The index fixings may - by construction - lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. Funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Options on swaps (swaptions) the risks typical to options in addition to the risks related to rates movements.

This document is being provided for the exclusive use of BRIAN HO at THE UNIVERSITY OF HONG KONG.

Derivative transactions involve numerous risks including market, counterparty default and illiquidity risk. The appropriateness of these products for use by investors depends on the investors' own circumstances, including their tax position, their regulatory environment and the nature of their other assets and liabilities; as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited - up to theoretically unlimited losses. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option, investors must review the 'Characteristics and Risks of Standardized Options", at https://www.theocc.com/company-information/documents-and-archives/options-disclosure-document. If you are unable to access the website, please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government-imposed exchange controls, which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at https://research.db.com/Research/ on each company's research page or under the 'Disclosures' tab. Investors are strongly encouraged to review this information before investing.

Deutsche Bank (which includes Deutsche Bank AG, its branches and affiliated companies) is not acting as a financial adviser, consultant or fiduciary to you or any of your agents (collectively, "You" or "Your") with respect to any information provided in this report. Deutsche Bank does not provide investment, legal, tax or accounting advice, Deutsche Bank is not acting as your impartial adviser, and does not express any opinion or recommendation whatsoever as to any strategies, products or any other information presented in the materials. Information contained herein is being provided solely on the basis that the recipient will make an independent assessment of the merits of any investment decision, and it does not constitute a recommendation of, or express an opinion on, any product or service or any trading strategy.

The information presented is general in nature and is not directed to retirement accounts or any specific person or account type, and is therefore provided to You on the express basis that it is not advice, and You may not rely upon it in making Your decision. The information we provide is being directed only to persons we believe to be financially sophisticated, who are capable of evaluating investment risks independently, both in general and with regard to particular transactions and investment strategies, and who understand that Deutsche Bank has financial interests in the offering of its products and services. If this is not the case, or if You are an IRA or other retail investor receiving this directly from us, we ask that you inform us immediately.

In July 2018, Deutsche Bank revised its rating system for short term ideas whereby the branding has been changed to Catalyst Calls ("CC") from SOLAR ideas; the rating categories for Catalyst Calls originated in the Americas region have been made consistent with the categories used by Analysts globally; and the effective time period for CCs has been reduced from a maximum of 180 days to 90 days.

United States: Approved and/or distributed by Deutsche Bank Securities Incorporated, a member of FINRA and SIPC. Analysts located outside of the United States are employed by non-US affiliates and are not registered/qualified as research analysts with FINRA.

European Economic Area (exc. United Kingdom): Approved and/or distributed by Deutsche Bank AG, a joint stock corporation with limited liability incorporated in the Federal Republic of Germany with its principal office in Frankfurt am Main. DEIPL may have received administrative warnings from the SEBI for breaches of Indian regulations. Deutsche Bank and/or its affiliate(s) may have debt holdings or positions in the subject company. With regard to information on associates, please refer to the "Shareholdings" section in the Annual Report at: https://www.db.com/ir/en/annual-reports.htm. For latest India research audit report, refer https://country.db.com/india/deutsche-equities-india/index?language_id=1.

Japan: Approved and/or distributed by Deutsche Securities Inc.(DSI). Registration number - Registered as a financial instruments dealer by the Head of the Kanto Local Finance Bureau (Kinsho) No. 117. Member of associations: JSDA, Type II Financial Instruments Firms Association and The Financial Futures Association of Japan. Commissions and risks involved in stock transactions - for stock transactions, we charge stock commissions and consumption tax by multiplying the transaction amount by the commission rate agreed with each customer. Stock transactions can lead to losses as a result of share price fluctuations and other factors. Transactions in foreign stocks can lead to additional losses stemming from foreign exchange fluctuations. We may also charge commissions and fees for certain categories of investment advice, products and services. Recommended investment strategies, products and services carry the risk of losses to principal and other losses as a result of changes in market and/or economic trends, and/or fluctuations in market value. Before deciding on the purchase of financial products and/or services, customers should carefully read the relevant disclosures, prospectuses and other documentation. 'Moody's', 'Standard Poor's', and 'Fitch' mentioned in this report are not registered credit rating agencies in Japan unless Japan or 'Nippon' is specifically designated in the name of the entity. Reports on Japanese listed companies not written by analysts of DSI are written by Deutsche Bank Group's analysts with the coverage companies specified by DSI. Some of the foreign securities stated on this report are not disclosed according to the Financial Instruments and Exchange Law of Japan. Target prices set by Deutsche Bank's equity analysts are based on a 12-month forecast period.

Korea: Distributed by Deutsche Securities Korea Co.

South Africa: Deutsche Bank AG Johannesburg is incorporated in the Federal Republic of Germany (Branch Register Number in South Africa: 1998/003298/10).

research refers to any particular financial product recipients of the research should consider any product disclosure statement, prospectus or other applicable disclosure document before making any decision about whether to acquire the product. In preparing this report, the primary analyst or an individual who assisted in the preparation of this report has likely been in contact with the company that is the subject of this research for confirmation/clarification of data, facts, statements, permission to use company-sourced material in the report, and/or site-visit attendance. Without prior approval from Research Management, analysts may not accept from current or potential Banking clients the costs of travel, accommodations, or other expenses incurred by analysts attending site visits, conferences, social events, and the like. Similarly, without prior approval from Research Management and Anti-Bribery and Corruption ("ABC") team, analysts may not accept perks or other items of value for their personal use from issuers they cover.

Additional information relative to securities, other financial products or issuers discussed in this report is available upon request. This report may not be reproduced, distributed or published without Deutsche Bank's prior written consent.

Backtested, hypothetical or simulated performance results have inherent limitations. Unlike an actual performance record based on trading actual client portfolios, simulated results are achieved by means of the retroactive application of a backtested model itself designed with the benefit of hindsight. Taking into account historical events the backtesting of performance also differs from actual account performance because an actual investment strategy may be adjusted any time, for any reason, including a response to material, economic or market factors. The backtested performance includes hypothetical results that do not reflect the reinvestment of dividends and other earnings or the deduction of advisory fees, brokerage or other commissions, and any other expenses that a client would have paid or actually paid. No representation is made that any trading strategy or account will or is likely to achieve profits or losses similar to those shown. Alternative modeling techniques or assumptions might produce significantly different results and prove to be more appropriate. Past hypothetical backtest results are neither an indicator nor guarantee of future returns. Actual results will vary, perhaps materially, from the analysis.

The method for computing individual E,S,G and composite ESG scores set forth herein is a novel method developed by the Research department within Deutsche Bank AG, computed using a systematic approach without human intervention. Different data providers, market sectors and geographies approach ESG analysis and incorporate the findings in a variety of ways. As such, the ESG scores referred to herein may differ from equivalent ratings developed and implemented by other ESG data providers in the market and may also differ from equivalent ratings developed and implemented by other divisions within the Deutsche Bank Group. Such ESG scores also differ from other ratings and rankings that have historically been applied in research reports published by Deutsche Bank AG. Further, such ESG scores do not represent a formal or official view of Deutsche Bank AG. It should be noted that the decision to incorporate ESG factors into any investment strategy may inhibit the ability to participate in certain investment opportunities that otherwise would be consistent with your investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.
